

ASSEMBLY & USE

PACKING LIST

A. Net Assembly	1
B. Frame Pole	2
C. Nylon Carry Bag	1
D. Ground Stakes	5

See inside for assembly detail

GENERAL USE

- Always confirm that no one is standing behind or near your practice net before you hit any balls.
- Assure that the frame poles are securely engaged at the pins and sleeve pockets as well as with the toggle & loop straps.
- You should position yourself as close to the net as you can while still allowing enough space for a free club swing. This will be approximately 12-18 inches in front of the net floor depending on your height.
- Never pack your net away when it is wet. Always dry it thoroughly before storing.
- Always use the five steel ground stakes provided when using your net in windy conditions.

WARNING Always inspect product prior to use. Do not use if product is warped, damaged or broken.

WARNING Do not allow others to walk behind or near the net while you are practicing. If you miss the net, it may cause injury to others.

ASSEMBLY & USE

ASSEMBLY

For the easiest assembly of your practice net, it is important to follow the sequence noted below.

Step 1

Lay the net assembly out flat on the ground. The two pole sleeves should be on top and running almost parallel to each other.

Step 2

Assemble the two shock-corded frame poles to their full length.

Step 3

Push one pole all the way through the blue pole sleeve until approximately 3 pole sections extend out of each end of the sleeve. Assure the nylon sleeve material is not bunched up unevenly on the pole. Repeat this with the second pole through the red pole sleeve.

Step 4

Taking the back pole first (red sleeve), insert one end into the red pocket sewn to the back corner of the net (b). Working your way along the pole pulling the sleeve taut as you go, arch the pole until you can insert it into the opposite red pocket (b). Taking the front pole, insert one end into the pin (c) attached at the front corner. Working your way along the pole pulling the sleeve taut as you go, arch the pole until you can insert it on the pin at the opposite corner (c).

Step 5

Standing the net up, 'scissor' the poles open until the net floor is stretched to its full size. Attach the red and blue pole retainer straps by inserting the toggles through the loops and clipping them (d).

Step 6

When using the net in windy conditions, secure your net using the five ground stakes provided.

Read the operating instructions on the back of this enclosure prior to using your practice net.

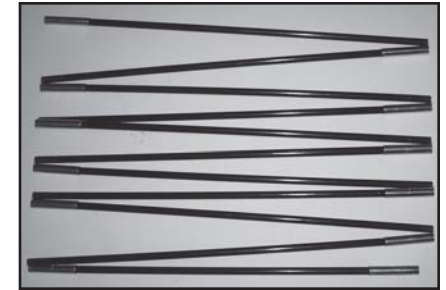

SETUP INSTRUCTIONS

Step 1

Layout Net

Step 2

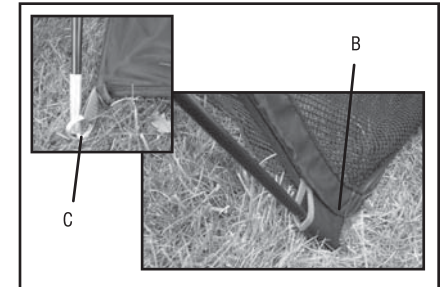

Assemble Frame Poles

Step 3

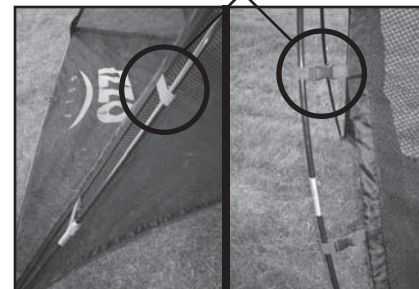

Pole / Sleeve Assembly

Step 4

Secure Poles to Net

Step 5

Secure Loops & Toggle Straps

Step 6

NOTE: Ground stakes are provided for the four corners of the net. The fifth stake secures the front center of the floor.
