

Introducing XtendAlign™

...the world's most advanced Putting alignment system

set-up

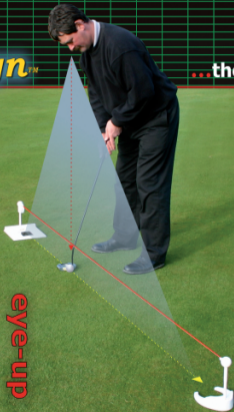

XtendAlign sets-up the correct starting position and ensures you perform the perfect "in-line" putting swing with your club face aligned directly at the target line.

XtendAlign also lets you swing the club freely along the putting line so you get the correct feedback on your stroke alignment.

Aim to strike the ball square at impact using a smooth accelerating stroke that sees the club head continue its path raised-up along the target line.

- 1 Ensure golf ball and the sweet spot of your putter are positioned directly below XtendAlign at a distance of 6" to 4ft from the mirror.
- 2 Your correct eye position is confirmed when the mirror reflection and string align to form one image.
- 3 Adopt correct posture and address position before making one last check back at the mirror, using only your eyes - do not turn your head!

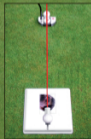

eye-up

The Coach can use XtendAlign to check eye position during play.

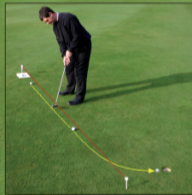

To secure and level the base plate use tee pegs. For putting positions beyond 4ft, simply incline the base station to the appropriate angle.

Coach's view point when observed from behind the line.

line-up

Use XtendAlign to work out the pace and correct target line for "breaking putts". In the picture above we have relatively flat ground to the hole that breaks from right to left. Here you extend the line as shown, using the length of the line as a gauge for the pace of your putt.
