

sureshotgps™

How far to the pin?

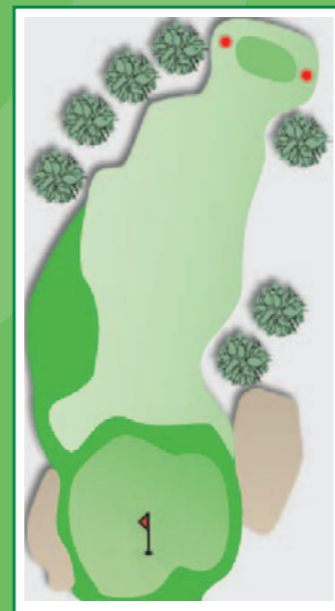

The answer is here.

sureshotgps™ improves your golf by providing distances anywhere on the course. No more searching for distance markers means faster play. A player can record distances for each club; this data is then used in providing personal club selection.

sureshotgps™ device features:

- Handheld (optional clip provided for fixing to belt or golf buggy) Global Positioning System displays distances to the front, centre and back of the green from anywhere Tee to Green
- Ability to display up to 15 additional reference points which give distances to hazards, e.g. traps, water and dog-legs etc.
- Data for multiple golf courses (up to 10) can be stored - course data can be recorded by the player or downloaded by subscribing to the Tee2Green database
- Can be used on any golf course around the world *(subject to local rules)*
- Personal club recommendation can be given for each shot (when enabled)
- Statistical information for a round can be collected
- Scores can be kept
- Specific shots can be measured and recorded e.g. driver distance. Once the player has measured distances for each club the information is stored in the sureshotgps™ and used to suggest a club selection (when enabled)
- Has a USB port which allows the unit to be recharged via an AC adaptor (optional car charger is available) and also connects the sureshotgps™ to a PC for uploading and downloading of course information & statistics

sureanalysis™ software included
